CONTENTS

1. INTRODUCTION

1.1 Context

Traffic management systems gather and produce a large amount of data. This data includes information about bridges, parking lots, information panels etc.

The 'Open Data' project makes this data available to the public for common use.

The 'Standard for Publishing Dynamic Parking Data' protocol [TL_SPDP] specifies a way to publish parking data. This protocol has been used as a base to define equivalent data publication for Bridges, Displays and VRIs. Data is provided to the public via the so-called 'pull' protocol (see Figure 1). This mechanism is described in [TL_SPDP].
Open Data

| Open Data Server (ODS) | ← Pull protocol → | Open Data client <n> |

Figure 1: System overview

1.2 Purpose of this document

This document describes the Open Data protocol that is available to Open Data clients for obtaining dynamic data. Application developers can use this document as reference guide.

2. OPEN DATA PROTOCOL

Four object types are supported for the Open Data protocol:
- parking facilities;
- bridges;
- information displays;
- VRI's[1].

For each object type both static and dynamic data is available. Static information about an object is entered manually by an operator and imported into the Open Data Server. An example of this static data can be the location on the map for displaying an object or the operator who is responsible for an object. Dynamic data is updated automatically and represents the current status of an object. This could be for example whether a bridge is open or closed. Because of the difference in nature between these two types of data, they can be requested separately. When dynamic and static data refer to the same object, this is evident from the fact that they use the same UUID as identifier to refer to the object.

[TL_SPDP] describes the content of parking facility data. This document describes the contents of other object types. These descriptions are not based on a standard (since there is currently no standard for this type of data). For the definition of static and dynamic parking information, the reader is referred to [TL_SPDP]. This document will use similar structures to represent the other types of data.
All timestamp fields 'lastUpdated' represent seconds since Unix Epoch (according to [TL_SPDP]).

Objects are matched by a UUID, which is part of the requested URL (see chapter 3 for details). The UUID is also part of a generic wrapper structure that is applicable to all object types. Figure 2 shows this generic structure and its relation to the ActualStatus object for parking data (as defined in [TL_SPDP]).
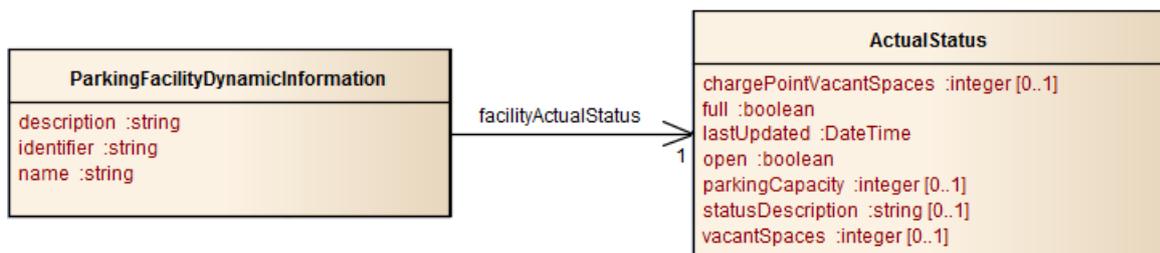

Figure 2: Wrapper class for status data

The meaning of the fields of the generic structure are described in the following table. This table is applicable to all object types described in the remainder of this chapter.

Field	Description
description	Description of the object
identifier	UUID of the object
name	Name of the object

---

[1] VRI is an abbreviation of the Dutch word 'verkeersregelinstallatie'. This is a generic term that can be translated as 'traffic control installation'. In the Open Data interface a 'VRI' is equivalent to the subtype 'traffic light'.

2.1.1 Complex data types

This chapter contains a number of specific complex data types. They are explained in the following table:

Data type	Description
DateTime	A type containing a date and a time on that date.
Weekday	A day of the week. Names in the enumeration have been chosen in accordance with the standard the HTTP standard (see IETF RFC 0822, Standard for ARPA Internet Text Messages, paragraph 5.1).
Time	A type containing the hour, minutes and seconds (on any day).
TimeType	Type for indication of time granularity containing a string. Possible values are {"Seconds", "Minutes", "Hours", "Days", "Weeks"}.

2.2 Dynamic data

This section will describe the dynamic data in the Open Data Protocol.

2.2.1 Dynamic bridge data

Name of the wrapper structure: BridgeDynamicInformation

2.2.1.1 ActualStatus
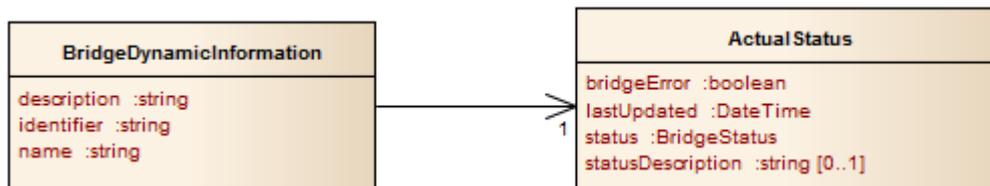

Field	Description
bridgeError	Indicates if the bridge is currently in error state (this state is independent of the operational status). This might be due to a broken peripheral (e.g. a warning light).
lastUpdated	Timestamp of last update.
status	Operational status of the bridge. See paragraph 2.2.1.2 for details.
statusDescription	Explanation for the current actual status.

2.2.1.2 <Enumeration> BridgeStatus
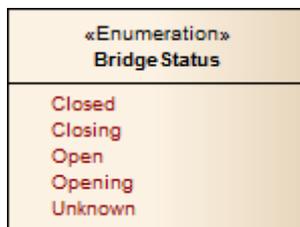

Field	Description
Closed	The bridge is closed. Road traffic can cross the bridge.
Closing	The bridge is moving from 'Open' to 'Closed' state.
Open	The bridge is fully opened. No road traffic can cross the bridge.
Opening	The bridge is moving from 'Closed' to 'Open' state.
Unknown	The bridge status is unknown (e.g.no communication).

2.2.2 Dynamic display data

2.2.2.1 ActualStatus

DisplayActualStatus

displayInfo :string
image :byte[]
lastUpdated :DateTime
status :DisplayState
statusDescription :string
text :string

DisplayDynamicInformation

description :string
identifier :string
name :string

Actual Status

displayInfo :string [0..1]
image :byte[]
lastUpdated :DateTime
status :DisplayStatus
statusDescription :string [0..1]
text :string [0..1]

Field	Description
displayInfo	A string representing (optional) display information like current luminance, temperature and protocol version.
image	Array of bytes representing the current image in PNG format. This includes text and images (the full display content is represented as an image).
lastUpdated	Timestamp of last update.
status	Operational status of the display. See paragraph 2.2.2.2 for details.
statusDescription	Explanation for the current actual status.
text	The display content represented as a (readable) ASCII text string. Predefined icons are represented by a 'tag'[2]. Other images are not available as text.

2.2.2.2 <Enumeration> DisplayStatus

«Enumeration»
DisplayState

Disabled
Error
NoData
OK
Unknown
Warning
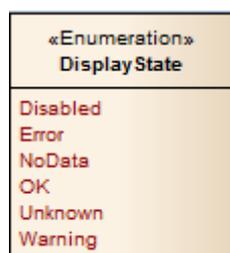

Field	Description
Disabled	The display is extinguished.
Error	The display has an error.
NoData	The display has no data to show.
OK	The display functions as intended.
Unknown	The display cannot be operated (e.g. no communication).
Warning	The display has a non-critical error (e.g. single led defect).

---

[2] See Appendix A for details

2.2.3   Dynamic VRI data

2.2.3.1   ActualStatus

| Field	Description
detectorError	Indicates if the VRI has 1 or more defect detectors.
lampError	Indicates if the VRI has 1 or more defect lamps.
lastUpdated	Timestamp of last update.
status	Operational status of the VRI. See paragraph 2.2.3.2 for details.
statusDescription	Explanation for the current actual status.

2.2.3.2   <Enumeration> VriStatus
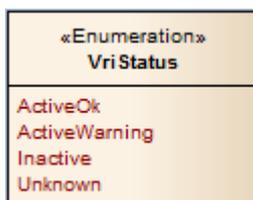

Field	Description
ActiveOk	The VRI is controlled autonomously without any problems.
ActiveWarning	The VRI is controlled autonomously, but has problems (e.g. a lamp or detector problem).
Inactive	The VRI is not being controlled (e.g. extinguished or blinking).
Unknown	The status of the VRI is unknown (e.g. no communication).

2.3 Static data

This section will describe the static data in the Open Data Protocol.

2.3.1 Static Bridge data
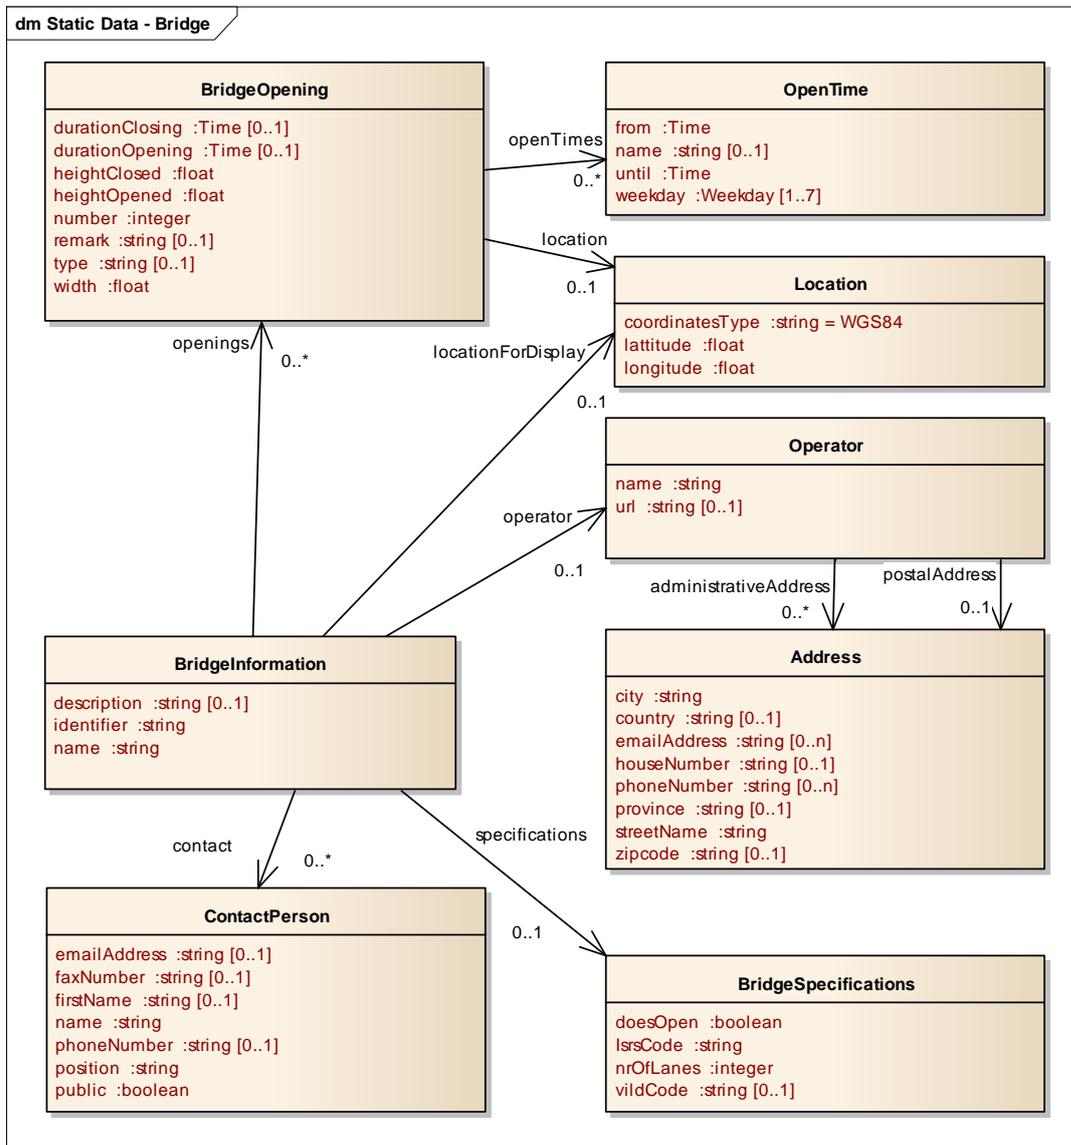

Figure 1 : The static data for Bridges structured in UML

2.3.1.1 BridgeInformation

Field	Description
description	Description of the bridge
identifier	UUID of the bridge
name	Name of the bridge
opening	List of parts of the bridge which can be opened
operator	Responsible operator of the bridge
specifications	Specific details about the bridge
locationForDisplay	The location of the bridge for displaying on the map
contact	List of contact persons for the bridge

Field	Field type	Minimum occurrences	Maximum occurrences
description	xs:string	0	1
identifier	xs:string	1	1
name	xs:string	1	1
opening	BridgeOpening	0	unbounded
operator	Operator	0	1
specifications	BridgeSpecifications	0	1
locationForDisplay	Location	0	1
contact	ContactPerson	0	unbounded

2.3.1.2 Address

Field	Description
city	City of address
country	Country of address
emailAddress	Email address of address
houseNumber	House number of address / for postal address also allowed: P.O.Box number
phoneNumber	Telephone number of address
province	Province of address
streetName	Street name of address / for postal address also allowed: P.O.Box
zipcode	Zip code of address

Field	Field type	Minimum occurrences	Maximum occurrences
city	xs:string	1	1
country	xs:string	0	1
emailAddress	xs:string	0	unbounded
houseNumber	xs:string	0	1
phoneNumber	xs:string	0	unbounded
province	xs:string	0	1
streetName	xs:string	1	1
zipcode	xs:string	0	1

2.3.1.3 BridgeOpening

Field	Description
durationClosing	Time required to transition from Open to Closed state
durationOpening	Time required to transition from Closed to Open state
heightClosed	Height in meters when closed measured from sealevel
heightOpened	Height in meters when opened measured from sealevel
number	Number of this part of the bridge which can be opened
openTimes	Possible opening times for this bridge
remark	Extra remarks (e.g. about train or road)
type	Mechanism type for opening this part of the bridge
width	Width in meters

Field	Field type	Minimum occurrences	Maximum occurrences
durationClosing	Time	0	1
durationOpening	Time	0	1
heightClosed	xs:float	1	1
heightOpened	xs:float	1	1
number	xs:integer	1	1
openTimes	OpenTime	0	unbounded
remark	xs:string	0	1
type	xs:string	0	1
width	xs:float	1	1

2.3.1.4 ContactPerson

Field	Description
emailAddress	E-mail address of the contact person
faxNumber	Fax number of the contact person
firstName	First name of the contact person
name	Name of the contact person
phoneNumber	Telephone number of the contact person
position	Function of the contact person
public	Indicates whether the contact details of the contact person can be made public or not

Field	Field type	Minimum occurrences	Maximum occurrences
emailAddress	xs:string	0	1
faxNumber	xs:string	0	1
firstName	xs:string	0	1
name	xs:string	1	1
phoneNumber	xs:string	0	1
position	xs:string	1	1
public	xs:boolean	1	1

2.3.1.5 Location

Field	Description
coordinatesType	Type of coordinate system, preferably WGS84
latitude	Latitude of coordinate in decimal degrees
longitude	Longitude of coordinate in decimal degrees

Field	Field type	Minimum occurrences	Maximum occurrences
coordinatesType	xs:string	0	1
latitude	xs:float	0	1
longitude	xs:float	0	1

2.3.1.6 OpenTime

Field	Description
endOfOpen	End time (of day) for possible opening of bridge
periodName	Optional name for this time period
remark	Remark possibly indicating special conditions for this enty time
startOfOpen	Start time (of day) for possible opening of bridge
weekday	List of weekdays for which this entry period is valid

Field	Field type	Minimum occurrences	Maximum occurrences
endOfOpen	Time	1	1
periodName	xs:string	0	1
remark	xs:string	0	1
startOfOpen	Time	1	1
weekday	Weekday	1	7

2.3.1.7 Operator

Field	Description
name	Name of the operator
administrativeAddress	List of administrative addresses of the operator
postalAddress	Postal address of the operator
url	Website address of the operator

Field	Field type	Minimum occurrences	Maximum occurrences
name	xs:string	1	1
administrativeAddress	Address	0	unbounded
postalAddress	Address	0	1
url	xs:string	0	1

2.3.1.8 BridgeSpecifications

Field	Description
doesOpen	Indicates whether the bridge can be opened
IsrsCode	ISRS identifier for this bridge
nrOfLanes	The total number of lanes of this bridge
vildCode	The VILD code of the road on which this bridge is located (if any)

Field	Field type	Minimum occurrences	Maximum occurrences
doesOpen	xs:boolean	1	1
IsrsCode	xs:string	1	1
nrOfLanes	xs:integer	1	1
vildCode	xs:string	0	1

2.3.2 Static Display data
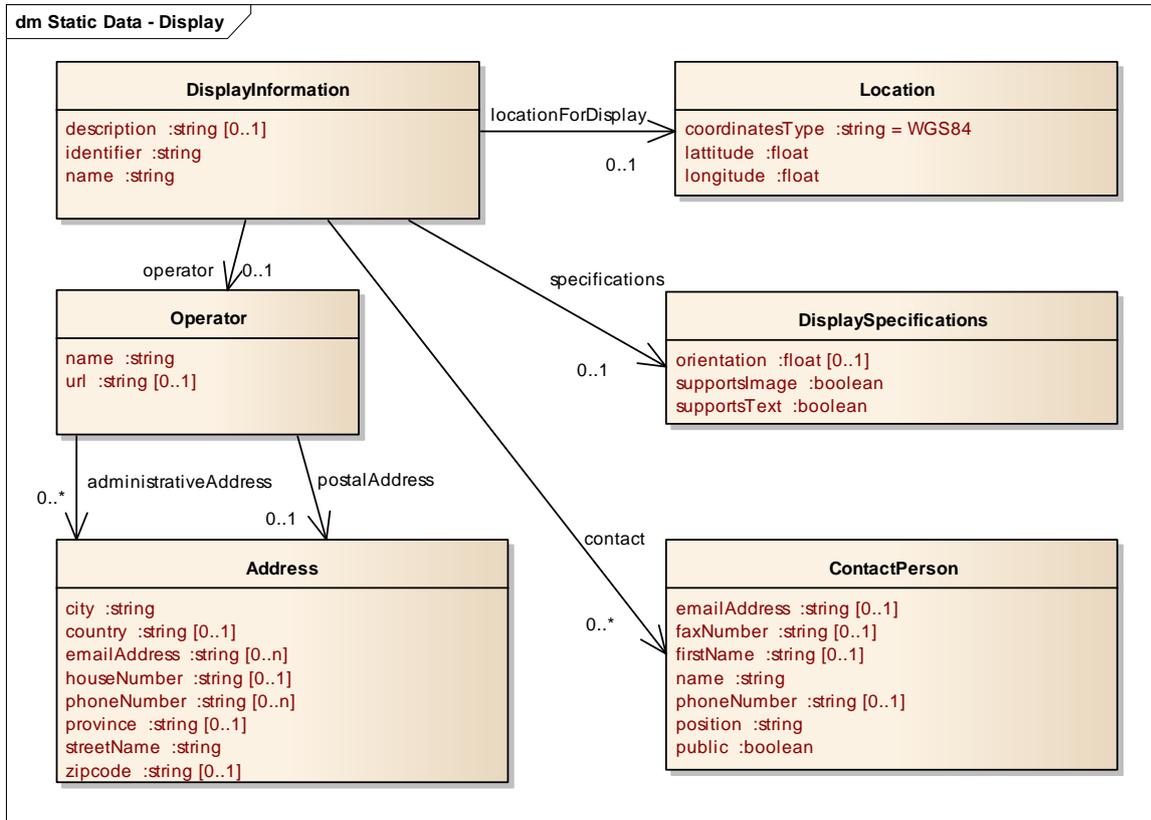

Figure 2 : The static data for Displays structured in UML

2.3.2.1 DisplayInformation

Field	Description
description	Description of the display
identifier	UUID of the display
name	Name of the display
specifications	Specific details about the display
locationForDisplay	The location of the display for displaying on the map
contact	List of contact persons for the display

Field	Field type	Minimum occurrences	Maximum occurrences
description	xs:string	0	1
identifier	xs:string	1	1
name	xs:string	1	1
specifications	DisplaySpecifications	0	1
locationForDisplay	Location	0	1
contact	ContactPerson	0	unbounded

2.3.2.2 Address

Field	Description
city	City of address
country	Country of address
emailAddress	Email address of address
houseNumber	House number of address / for postal address also allowed: P.O.Box number
phoneNumber	Telephone number of address
province	Province of address
streetName	Street name of address / for postal address also allowed: P.O.Box
zipcode	Zip code of address

Field	Field type	Minimum occurrences	Maximum occurrences
city	xs:string	1	1
country	xs:string	0	1
emailAddress	xs:string	0	unbounded
houseNumber	xs:string	0	1
phoneNumber	xs:string	0	unbounded
province	xs:string	0	1
streetName	xs:string	1	1
zipcode	xs:string	0	1

2.3.2.3 ContactPerson

Field	Description
emailAddress	E-mail address of the contact person
faxNumber	Fax number of the contact person
firstName	First name of the contact person
name	Name of the contact person
phoneNumber	Telephone number of the contact person
position	Function of the contact person
public	Indicates whether the contact details of the contact person can be made public or not

Field	Field type	Minimum occurrences	Maximum occurrences
emailAddress	xs:string	0	1
faxNumber	xs:string	0	1
firstName	xs:string	0	1
name	xs:string	1	1
phoneNumber	xs:string	0	1
position	xs:string	1	1
public	xs:boolean	1	1

2.3.2.4 Location

Field	Description
coordinatesType	Type of coordinate system, preferably WGS84
Latitude	Latitude of coordinate in decimal degrees
Longitude	Longitude of coordinate in decimal degrees

Field	Field type	Minimum occurrences	Maximum occurrences
coordinatesType	xs:string	0	1
Latitude	xs:float	0	1
Longitude	xs:float	0	1

2.3.2.5 Operator

Field	Description
name	Name of the operator
administrativeAddress	List of administrative addresses of the operator
postalAddress	Postal address of the operator
url	Website address of the operator

Field	Field type	Minimum occurrences	Maximum occurrences
name	xs:string	1	1
administrativeAddress	Address	0	unbounded
postalAddress	Address	0	1
url	xs:string	0	1

2.3.2.6 DisplaySpecifications

Field	Description
orientation	Direction of orientation in degrees to magnetic north
supportsImage	Whether the display supports images
supportsText	Whether the display supports text

Field	Field type	Minimum occurrences	Maximum occurrences
orientation	xs:float	0	1
supportsImage	xs:boolean	1	1
supportsText	xs:boolean	1	1

2.3.3 Static VRI data
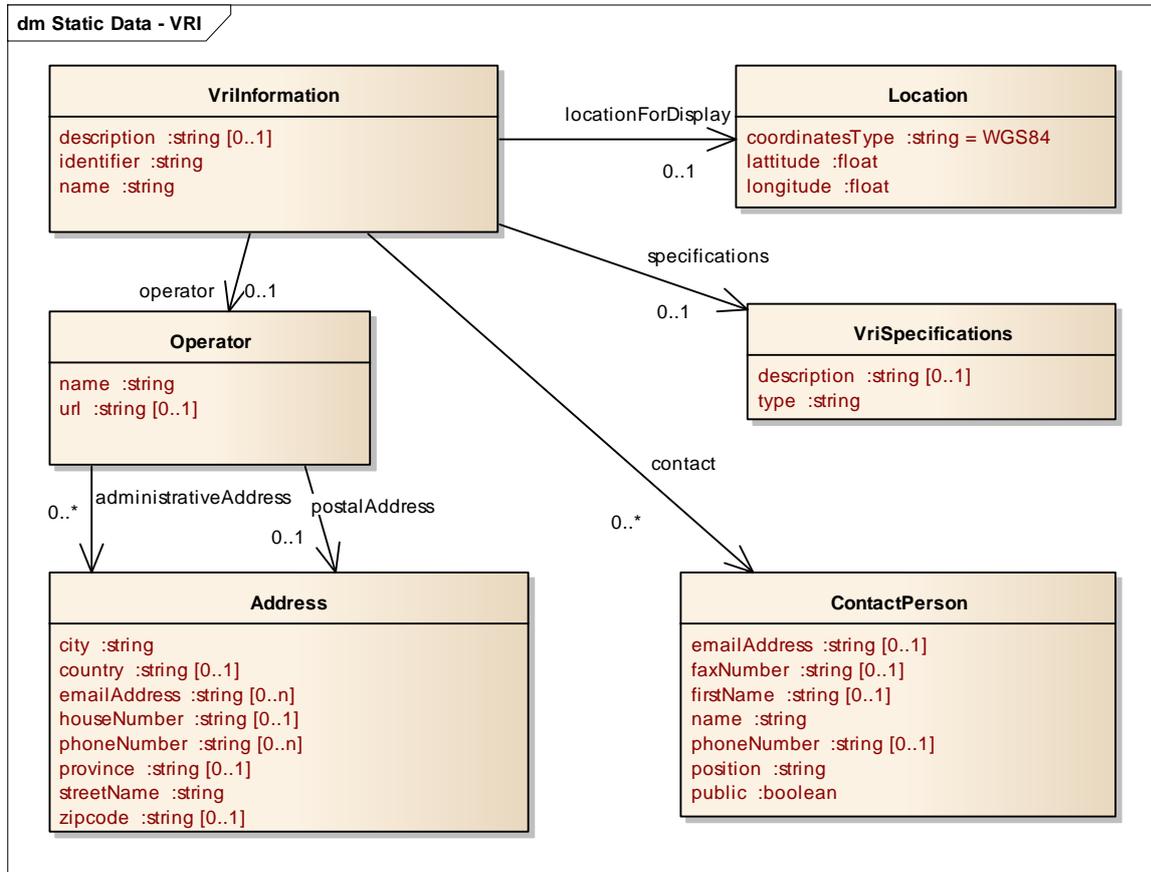

Figure 3 : The static data for VRIs structured in UML

2.3.3.1 VriInformation

Field	Description
description	Description of the VRI
identifier	UUID of the VRI
name	Name of the VRI
specifications	Specific details about the VRI
locationForDisplay	The location of the VRI for displaying on the map
contact	List of contact persons for the VRI

Field	Field type	Minimum occurrences	Maximum occurrences
description	xs:string	0	1
identifier	xs:string	1	1
name	xs:string	1	1
specifications	VriSpecifications	0	1
locationForDisplay	Location	0	1
contact	ContactPerson	0	unbounded

2.3.3.2 Address

Field	Description
city	City of address
country	Country of address
emailAddress	Email address of address
houseNumber	House number of address / for postal address also allowed: P.O.Box number
phoneNumber	Telephone number of address
province	Province of address
streetName	Street name of address / for postal address also allowed: P.O.Box
zipcode	Zip code of address

Field	Field type	Minimum occurrences	Maximum occurrences
city	xs:string	1	1
country	xs:string	0	1
emailAddress	xs:string	0	unbounded
houseNumber	xs:string	0	1
phoneNumber	xs:string	0	unbounded
province	xs:string	0	1
streetName	xs:string	1	1
zipcode	xs:string	0	1

2.3.3.3 ContactPerson

Field	Description
emailAddress	E-mail address of the contact person
faxNumber	Fax number of the contact person
firstName	First name of the contact person
name	Name of the contact person
phoneNumber	Telephone number of the contact person
position	Function of the contact person
public	Indicates whether the contact details of the contact person can be made public or not

Field	Field type	Minimum occurrences	Maximum occurrences
emailAddress	xs:string	0	1
faxNumber	xs:string	0	1
firstName	xs:string	0	1
name	xs:string	1	1
phoneNumber	xs:string	0	1
position	xs:string	1	1
public	xs:boolean	1	1

2.3.3.4 Location

Field	Description
coordinatesType	Type of coordinate system, preferably WGS84
Latitude	Latitude of coordinate in decimal degrees
Longitude	Longitude of coordinate in decimal degrees

Field	Field type	Minimum occurrences	Maximum occurrences
coordinatesType	xs:string	0	1
Latitude	xs:float	0	1
Longitude	xs:float	0	1

2.3.3.5 Operator

Field	Description
name	Name of the operator
administrativeAddress	List of administrative addresses of the operator
postalAddress	Postal address of the operator
url	Website address of the operator

Field	Field type	Minimum occurrences	Maximum occurrences
name	xs:string	1	1
administrativeAddress	Address	0	unbounded
postalAddress	Address	0	1
url	xs:string	0	1

2.3.3.6 VriSpecifications

Field	Description
type	The type of crossing
description	Description of the crossing

Field	Field type	Minimum occurrences	Maximum occurrences
type	xs:string	1	1
description	xs:string	0	1

2.4 Index data

When requesting a list of known Bridges, Displays or VRIs, the returned data will be a list of index entries. This section will describe the structure of these index entries.
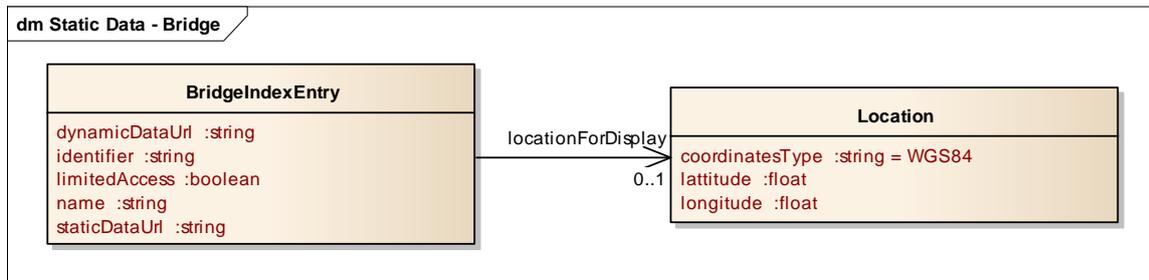

2.4.1 BridgeIndexEntry

Figure 4 : The index data for Bridges structured in UML

Field	Description
dynamicDataUrl	URL that must be used to retrieve the dynamic data of the bridge
identifier	UUID of the bridge
limitedAccess	Indicates whether authentication is necessary to request data for this bridge
name	Name of the bridge
staticDataUrl	URL that must be used to retrieve the static data of the bridge
locationForDisplay	Location of the bridge for displaying on maps (preferred in WGS84)

| Field	Field type	Minimum occurrences	Maximum occurrences
dynamicDataUrl	xs:string	1	1
identifier	xs:string	1	1
limitedAccess	xs:boolean	1	1
name	xs:string	1	1
staticDataUrl	xs:string	1	1
locationForDisplay	Location	0	1

2.4.2 DisplayIndexEntry

Figure 5 : The index data for Displays structured in UML

Field	Description
dynamicDataUrl	URL that must be used to retrieve the dynamic data of the display
identifier	UUID of the display
limitedAccess	Indicates whether authentication is necessary to request data for this display
name	Name of the display
staticDataUrl	URL that must be used to retrieve the static data of the display
locationForDisplay	Location of the display for displaying on maps (preferred in WGS84)

| Field	Field type	Minimum occurrences	Maximum occurrences
dynamicDataUrl	xs:string	1	1
identifier	xs:string	1	1
limitedAccess	xs:boolean	1	1
name	xs:string	1	1
staticDataUrl	xs:string	1	1
locationForDisplay	Location	0	1

2.4.3 VriIndexEntry

Figure 6 : The index data for VRIs structured in UML

Field	Description
dynamicDataUrl	URL that must be used to retrieve the dynamic data of the VRI
identifier	UUID of the VRI
limitedAccess	Indicates whether authentication is necessary to request data for this VRI
name	Name of the VRI
staticDataUrl	URL that must be used to retrieve the static data of the VRI
locationForDisplay	Location of the VRI for displaying on maps (preferred in WGS84)

Field	Field type	Minimum occurrences	Maximum occurrences
dynamicDataUrl	xs:string	1	1
identifier	xs:string	1	1
limitedAccess	xs:boolean	1	1
name	xs:string	1	1
staticDataUrl	xs:string	1	1
locationForDisplay	Location	0	1

3.   REST INTERFACE

Clients obtain data by requesting a URL. In [TL_SPDP] for parking data, there are three request types defined: A list of objects, static data for a specific object or dynamic data for a specific object. Similarly for Bridges, Displays and VRIs it is possible to request a list of known objects of a specific type (all Bridges, all Displays or all VRIs). For requesting a list of objects, the URL is built up as:

```
http://<server_IP>/<objectType>/<version>/
```
- `<server_IP>`: the IP address of the server;
- `<objectType>`: one of the following types:
    - `parkingdata;`
    - `bridgedata;`
    - `displaydata;`
    - `vridata.`
- `<version>`: protocol version (for the current interface 'v1');

For version 1 the following URLs are used to get a list of available objects:
- `http://<server_IP>/parkingdata/v1/`
- `http://<server_IP>/bridgedata/v1/`
- `http://<server_IP>/displaydata/v1/`
- `http://<server_IP>/vridata/v1/`

When the UUID of an object is known, it can be requested directly. The URL to use will depend on the type of object (Parking, Bridge, Display, VRI) and whether the static or dynamic date is requested. This URL is built up as follows:

```
http://<server_IP>/<objectType>/<version>/<static|dynamic>/<UUID>
```

- `<server_IP>`: the IP address of the server;
- `<objectType>`: one of the following types:
    - `parkingdata;`
    - `bridgedata;`
    - `displaydata;`
    - `vridata.`
- `<version>`: protocol version (for the current interface 'v1');
- `<static|dynamic>`: indicates whether 'static' or 'dynamic' data is involved. Only dynamic data is supported;
- `<UUID>`: globally unique identifier.

In addition to the requests for retrieving a list of objects, static data for a specific object or dynamic data for a specific object, we will also define a way to formulate a query for objects for which the properties meet specific requirements (see section 3.1.4). When querying for objects, the URL is built up as:

```
http://<server_IP>/query/<version>/?<parameters>
```
- `<server_IP>`: the IP address of the server;
- `<version>`: protocol version (for the current interface 'v1');
- `<parameters>`: a list of key-value pairs separated by '&' characters (e.g. `name=Kralingse%20plas-5`), where spaces and other unsafe characters are replaced by `%20` per [RFC 1738]. The possible keys are:

- o `objectType`: The type of an object should be this ("parkingdata", "bridgedata", "displaydata" or "vridata").
- o `name`: The name of an object should be this.
- o `minLatitude`: The latitude of the location of the object should be at least this.
- o `maxLatitude`: The latitude of the location of the object should be at most this.
- o `minLongitude`: The longitude of the location of the object should be at least this.
- o `maxLongitude`: The longitude of the location of the object should be at most this.

When no parameters are provided, the query will default in returning a list of all objects of all types. For version 1 the following URL would be used to get a list of all available objects: `http://<server_IP>/query/v1/`

3.1 Client pull response

When requesting a list of objects, the responses for the different types are described in the following subsections.

3.1.1 Client pull responses for lists of objects

3.1.1.1 Message content

The content of the response message for a list of Bridge objects is structured like:

Field	Type
bridges	BridgeIndexEntry

The content of the response message for a list of Display objects is structured like:

Field	Type
displays	DisplayIndexEntry

The content of the response message for a list of Bridge objects is structured like:

Field	Type
vris	VriIndexEntry

3.1.1.2 JSON example of response for list of Bridges

```
HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: ...
{
    bridges: [
        {
            "name": "...",
            "identifier": "...",
            "limitedAccess": true
            "locationForDisplay":
                {
                    "coordinatesType": "WGS84"
                    "latitude": 52.326701
```

```
            "longitude": 4.98765
        },
        "staticDataUrl": "http://...",
        "dynamicDataUrl": "http://..."
    },
    {
        "name": "...",
        "identifier": "...",
        "limitedAccess": true
        "locationForDisplay":
            {
                "coordinatesType": "WGS84"
                "latitude": 52.326701
                "longitude": 4.98765
            },
        "staticDataUrl": "http://...",
        "dynamicDataUrl": "http://..."
    }
    ]
}
```

3.1.1.3 JSON example of response for list of Displays

```
HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: ...
{
    displays: [
        {
            "name": "...",
            "identifier": "...",
            "limitedAccess": true
            "locationForDisplay":
                {
                    "coordinatesType": "WGS84"
                    "latitude": 52.326701
                    "longitude": 4.98765
                },
            "staticDataUrl": "http://...",
            "dynamicDataUrl": "http://..."
        },
        {
            "name": "...",
            "identifier": "...",
            "limitedAccess": true
            "locationForDisplay":
                {
                    "coordinatesType": "WGS84"
                    "latitude": 52.326701
                    "longitude": 4.98765
                },
            "staticDataUrl": "http://...",
            "dynamicDataUrl": "http://..."
        }
    ]
}
```

3.1.1.4 JSON example of response for list of VRIs

```
HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: ...
{
    vris: [
        {
            "name": "...",
            "identifier": "...",
            "limitedAccess": true
            "locationForDisplay":
                {
                    "coordinatesType": "WGS84"
                    "latitude": 52.326701
                    "longitude": 4.98765
                },
            "staticDataUrl": "http://...",
            "dynamicDataUrl": "http://..."
        },
        {
            "name": "...",
            "identifier": "...",
            "limitedAccess": true
            "locationForDisplay":
                {
                    "coordinatesType": "WGS84"
                    "latitude": 52.326701
                    "longitude": 4.98765
                },
            "staticDataUrl": "http://...",
            "dynamicDataUrl": "http://..."
        }
    ]
}
```

When requesting a single object directly, the response contain more details for the specified object. Since the UUID is globally unique, it corresponds to exactly one item if it exists. When requesting the dynamic information, the actual status for parking information is described in [TL_SPDP]. , The responses for the other types are described in the following subsections.

3.1.2 Client pull responses for dynamic data

3.1.2.1 JSON example of response for dynamic Bridge data

```
HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: ...
{
  "bridgeDynamicInformation": {
    "facilityActualStatus": {
      "status": "Closing",
      "bridgeError": false,
      "lastUpdated": 1402560876,
      "statusDescription": "Gaat dicht"
    },
```

```
        "description": "r_bfull",
        "identifier": "b_full",
        "name": "B Rivier"
    }
}
```

3.1.2.2 JSON example of response for dynamic Display data

```
HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: ...
{
  "displayDynamicInformation": {
    "facilityActualStatus": {
      "displayInfo": "v1",
      "image": "z4Ag4oiIIOKEnQ==",
      "lastUpdated": 1402560876,
      "status": "OK",
      "statusDescription": "OK"
      "text": "π ∈ ℝ",
    },
    "description": "",
    "identifier": "3002AR_a1124e02-7524-4270-b121-a6310956a384",
    "name": "Display-5"
  }
}
```

3.1.2.3 JSON example of response for dynamic VRI data

```
HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: ...
{
  "vriDynamicInformation": {
    "facilityActualStatus": {
      "detectorError": false,
      "lampError": false,
      "lastUpdated": 1402560876,
      "status": "ActiveOk",
      "statusDescription": "OK"
    },
    "description": "Vri description",
    "identifier": "Vri-uuid-098876",
    "name": "Vri-name"
  }
}
```

An error code is returned if the requested UUID cannot be found (see 3.3).

3.1.3 Client pull responses for static data

Similarly for static data, the responses for the different object types are described in the subsequent sections.

3.1.3.1 JSON example of response for static Bridge data

```
HTTP/1.1 200 OK
```

```
Content-Type: application/json
Content-Length: ...
{
"bridgedata":
    {
       "location": {
         "coordinatesType": "WGS84",
         "latitude": 51.912211,
         "longitude": 4.430988
       },
       "description": "",
       "identifier": "3002AR_5d7dd779-f64a-4a46-903f-6563b04c355a",
       "name": "123456"
    }
}
```

3.1.3.2 JSON example of response for static Display data

```
HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: ...
{
"displaydata":
    {
       "location": {
         "coordinatesType": "WGS84",
         "latitude": 51.936,
         "longitude": 4.515
       },
       "description": "",
       "identifier": "3002AR_a1124e02-7524-4270-b121-a6310956a384",
       "name": "Kralingse plas-5"
    }
}
```

3.1.3.3 JSON example of response for static VRI data

```
HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: ...
{
  "vridata":
    {
       "location": {
         "coordinatesType": "WGS84",
         "latitude": 51.84,
         "longitude": 4.372
       },
       "description": "",
       "identifier": "3002AR_61811515-4b69-4347-888e-af9a4fe4be4e",
       "name": "00001"
    }
}
```

An error code is returned if the requested UUID cannot be found (see 3.3).

3.1.4 Client query interface

Instead of requesting a list of all available objects of a specific type, we will also allow querying for objects with specific properties. As described at the start of this chapter, an empty query (e.g. `http://<server_IP>/query/v1/`) will result in a list of all available objects.

3.1.4.1 JSON example of response for query

```
HTTP/1.1 200 OK
Content-Type: application/json
Content-Length: ...
{
    "query": [
        {
            "name": "...",
            "identifier": "...",
            "limitedAccess": true
            "locationForDisplay":
                {
                    "coordinatesType": "WGS84"
                    "latitude": 52.326701
                    "longitude": 4.98765
                },
            "staticDataUrl": "http://...",
            "dynamicDataUrl": "http://..."
        },
        {
            "name": "...",
            "identifier": "...",
            "limitedAccess": true
            "locationForDisplay":
                {
                    "coordinatesType": "WGS84"
                    "latitude": 52.326701
                    "longitude": 4.98765
                },
            "staticDataUrl": "http://...",
            "dynamicDataUrl": "http://..."
        },
        {
            "name": "...",
            "identifier": "...",
            "limitedAccess": true
            "locationForDisplay":
                {
                    "coordinatesType": "WGS84"
                    "latitude": 52.326701
                    "longitude": 4.98765
                },
            "staticDataUrl": "http://...",
            "dynamicDataUrl": "http://..."
        },
    ]
}
```

An error code is returned if the query is malformed (see 3.3).

3.2   Authentication

No authentication is required for the Open Data interface towards clients.

3.3   Server status response codes

According to [TL_SPDP], the server can respond with one of the following HTTP response codes:

- status code 200 ('Ok') if the request was accepted by the server;
- status code 400 ('Bad request') if the request is incorrect according to the server;
- status code 404 ('Not found') if the server has no data for this object.

4. GLOSSARY

Abbreviation	Explanation
HTTP	Hypertext Transfer Protocol
JSON	JavaScript Object Notation
URL	Uniform Resource Locator
UUID	Universally Unique Identifier

APPENDIX A.   ICON TAGS FOR DISPLAYS

Some displays support the ability to show text lines combined with icons. These icons are part of a fixed set. To show an icon, a tag is inserted in the text line.

A tag has the following format: `${tag}` (e.g. `${tram}`)

Table 1 shows the mapping between available tags and the corresponding icon.

tag	icon	tag	icon	tag	icon	tag	icon

APPENDIX B.   CREATIVE COMMONS LICENTIE

THE WORK (AS DEFINED BELOW) IS PROVIDED UNDER THE TERMS OF THIS
CREATIVE COMMONS PUBLIC LICENSE ("CCPL" OR "LICENSE"). THE WORK IS
PROTECTED BY COPYRIGHT AND/OR OTHER APPLICABLE LAW. ANY USE OF THE
WORK OTHER THAN AS AUTHORIZED UNDER THIS LICENSE OR COPYRIGHT LAW IS
PROHIBITED.
BY EXERCISING ANY RIGHTS TO THE WORK PROVIDED HERE, YOU ACCEPT AND
AGREE TO BE BOUND BY THE TERMS OF THIS LICENSE. TO THE EXTENT THIS
LICENSE MAY BE CONSIDERED TO BE A CONTRACT, THE LICENSOR GRANTS YOU
THE RIGHTS CONTAINED HERE IN CONSIDERATION OF YOUR ACCEPTANCE OF
SUCH TERMS AND CONDITIONS.
1. Definitions
"Adaptation" means a work based upon the Work, or upon the Work and
other pre-existing works, such as a translation, adaptation,
derivative work, arrangement of music or other alterations of a
literary or artistic work, or phonogram or performance and includes
cinematographic adaptations or any other form in which the Work may
be recast, transformed, or adapted including in any form
recognizably derived from the original, except that a work that
constitutes a Collection will not be considered an Adaptation for
the purpose of this License. For the avoidance of doubt, where the
Work is a musical work, performance or phonogram, the
synchronization of the Work in timed-relation with a moving image
("synching") will be considered an Adaptation for the purpose of
this License.
"Collection" means a collection of literary or artistic works, such
as encyclopedias and anthologies, or performances, phonograms or
broadcasts, or other works or subject matter other than works listed
in Section 1(f) below, which, by reason of the selection and
arrangement of their contents, constitute intellectual creations, in
which the Work is included in its entirety in unmodified form along
with one or more other contributions, each constituting separate and
independent works in themselves, which together are assembled into a
collective whole. A work that constitutes a Collection will not be
considered an Adaptation (as defined above) for the purposes of this
License.
"Distribute" means to make available to the public the original and
copies of the Work through sale or other transfer of ownership.
"Licensor" means the individual, individuals, entity or entities
that offer(s) the Work under the terms of this License.
"Original Author" means, in the case of a literary or artistic work,
the individual, individuals, entity or entities who created the Work
or if no individual or entity can be identified, the publisher; and
in addition (i) in the case of a performance the actors, singers,
musicians, dancers, and other persons who act, sing, deliver,
declaim, play in, interpret or otherwise perform literary or
artistic works or expressions of folklore; (ii) in the case of a
phonogram the producer being the person or legal entity who first
fixes the sounds of a performance or other sounds; and, (iii) in the
case of broadcasts, the organization that transmits the broadcast.
"Work" means the literary and/or artistic work offered under the
terms of this License including without limitation any production in
the literary, scientific and artistic domain, whatever may be the
mode or form of its expression including digital form, such as a
book, pamphlet and other writing; a lecture, address, sermon or
other work of the same nature; a dramatic or dramatico-musical work;

a choreographic work or entertainment in dumb show; a musical composition with or without words; a cinematographic work to which are assimilated works expressed by a process analogous to cinematography; a work of drawing, painting, architecture, sculpture, engraving or lithography; a photographic work to which are assimilated works expressed by a process analogous to photography; a work of applied art; an illustration, map, plan, sketch or three-dimensional work relative to geography, topography, architecture or science; a performance; a broadcast; a phonogram; a compilation of data to the extent it is protected as a copyrightable work; or a work performed by a variety or circus performer to the extent it is not otherwise considered a literary or artistic work. "You" means an individual or entity exercising rights under this License who has not previously violated the terms of this License with respect to the Work, or who has received express permission from the Licensor to exercise rights under this License despite a previous violation.
"Publicly Perform" means to perform public recitations of the Work and to communicate to the public those public recitations, by any means or process, including by wire or wireless means or public digital performances; to make available to the public Works in such a way that members of the public may access these Works from a place and at a place individually chosen by them; to perform the Work to the public by any means or process and the communication to the public of the performances of the Work, including by public digital performance; to broadcast and rebroadcast the Work by any means including signs, sounds or images.
"Reproduce" means to make copies of the Work by any means including without limitation by sound or visual recordings and the right of fixation and reproducing fixations of the Work, including storage of a protected performance or phonogram in digital form or other electronic medium.
2. Fair Dealing Rights. Nothing in this License is intended to reduce, limit, or restrict any uses free from copyright or rights arising from limitations or exceptions that are provided for in connection with the copyright protection under copyright law or other applicable laws.
3. License Grant. Subject to the terms and conditions of this License, Licensor hereby grants You a worldwide, royalty-free, non-exclusive, perpetual (for the duration of the applicable copyright) license to exercise the rights in the Work as stated below:
to Reproduce the Work, to incorporate the Work into one or more Collections, and to Reproduce the Work as incorporated in the Collections; and,
to Distribute and Publicly Perform the Work including as incorporated in Collections.
For the avoidance of doubt:
Non-waivable Compulsory License Schemes. In those jurisdictions in which the right to collect royalties through any statutory or compulsory licensing scheme cannot be waived, the Licensor reserves the exclusive right to collect such royalties for any exercise by You of the rights granted under this License;
Waivable Compulsory License Schemes. In those jurisdictions in which the right to collect royalties through any statutory or compulsory licensing scheme can be waived, the Licensor waives the exclusive right to collect such royalties for any exercise by You of the rights granted under this License; and,

Voluntary License Schemes. The Licensor waives the right to collect
royalties, whether individually or, in the event that the Licensor
is a member of a collecting society that administers voluntary
licensing schemes, via that society, from any exercise by You of the
rights granted under this License.
The above rights may be exercised in all media and formats whether
now known or hereafter devised. The above rights include the right
to make such modifications as are technically necessary to exercise
the rights in other media and formats, but otherwise you have no
rights to make Adaptations. Subject to Section 8(f), all rights not
expressly granted by Licensor are hereby reserved.
4. Restrictions. The license granted in Section 3 above is expressly
made subject to and limited by the following restrictions:
You may Distribute or Publicly Perform the Work only under the terms
of this License. You must include a copy of, or the Uniform Resource
Identifier (URI) for, this License with every copy of the Work You
Distribute or Publicly Perform. You may not offer or impose any
terms on the Work that restrict the terms of this License or the
ability of the recipient of the Work to exercise the rights granted
to that recipient under the terms of the License. You may not
sublicense the Work. You must keep intact all notices that refer to
this License and to the disclaimer of warranties with every copy of
the Work You Distribute or Publicly Perform. When You Distribute or
Publicly Perform the Work, You may not impose any effective
technological measures on the Work that restrict the ability of a
recipient of the Work from You to exercise the rights granted to
that recipient under the terms of the License. This Section 4(a)
applies to the Work as incorporated in a Collection, but this does
not require the Collection apart from the Work itself to be made
subject to the terms of this License. If You create a Collection,
upon notice from any Licensor You must, to the extent practicable,
remove from the Collection any credit as required by Section 4(b),
as requested.
If You Distribute, or Publicly Perform the Work or Collections, You
must, unless a request has been made pursuant to Section 4(a), keep
intact all copyright notices for the Work and provide, reasonable to
the medium or means You are utilizing: (i) the name of the Original
Author (or pseudonym, if applicable) if supplied, and/or if the
Original Author and/or Licensor designate another party or parties
(e.g., a sponsor institute, publishing entity, journal) for
attribution ("Attribution Parties") in Licensor's copyright notice,
terms of service or by other reasonable means, the name of such
party or parties; (ii) the title of the Work if supplied; (iii) to
the extent reasonably practicable, the URI, if any, that Licensor
specifies to be associated with the Work, unless such URI does not
refer to the copyright notice or licensing information for the Work.
The credit required by this Section 4(b) may be implemented in any
reasonable manner; provided, however, that in the case of a
Collection, at a minimum such credit will appear, if a credit for
all contributing authors of the Collection appears, then as part of
these credits and in a manner at least as prominent as the credits
for the other contributing authors. For the avoidance of doubt, You
may only use the credit required by this Section for the purpose of
attribution in the manner set out above and, by exercising Your
rights under this License, You may not implicitly or explicitly
assert or imply any connection with, sponsorship or endorsement by
the Original Author, Licensor and/or Attribution Parties, as

appropriate, of You or Your use of the Work, without the separate, express prior written permission of the Original Author, Licensor and/or Attribution Parties.

Except as otherwise agreed in writing by the Licensor or as may be otherwise permitted by applicable law, if You Reproduce, Distribute or Publicly Perform the Work either by itself or as part of any Collections, You must not distort, mutilate, modify or take other derogatory action in relation to the Work which would be prejudicial to the Original Author's honor or reputation.

5. Representations, Warranties and Disclaimer

UNLESS OTHERWISE MUTUALLY AGREED TO BY THE PARTIES IN WRITING, LICENSOR OFFERS THE WORK AS-IS AND MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND CONCERNING THE WORK, EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF TITLE, MERCHANTIBILITY, FITNESS FOR A PARTICULAR PURPOSE, NONINFRINGEMENT, OR THE ABSENCE OF LATENT OR OTHER DEFECTS, ACCURACY, OR THE PRESENCE OF ABSENCE OF ERRORS, WHETHER OR NOT DISCOVERABLE. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF IMPLIED WARRANTIES, SO SUCH EXCLUSION MAY NOT APPLY TO YOU.

6. Limitation on Liability. EXCEPT TO THE EXTENT REQUIRED BY APPLICABLE LAW, IN NO EVENT WILL LICENSOR BE LIABLE TO YOU ON ANY LEGAL THEORY FOR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL, PUNITIVE OR EXEMPLARY DAMAGES ARISING OUT OF THIS LICENSE OR THE USE OF THE WORK, EVEN IF LICENSOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. Termination

This License and the rights granted hereunder will terminate automatically upon any breach by You of the terms of this License. Individuals or entities who have received Collections from You under this License, however, will not have their licenses terminated provided such individuals or entities remain in full compliance with those licenses. Sections 1, 2, 5, 6, 7, and 8 will survive any termination of this License.

Subject to the above terms and conditions, the license granted here is perpetual (for the duration of the applicable copyright in the Work). Notwithstanding the above, Licensor reserves the right to release the Work under different license terms or to stop distributing the Work at any time; provided, however that any such election will not serve to withdraw this License (or any other license that has been, or is required to be, granted under the terms of this License), and this License will continue in full force and effect unless terminated as stated above.

8. Miscellaneous

Each time You Distribute or Publicly Perform the Work or a Collection, the Licensor offers to the recipient a license to the Work on the same terms and conditions as the license granted to You under this License.

If any provision of this License is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this License, and without further action by the parties to this agreement, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

No term or provision of this License shall be deemed waived and no breach consented to unless such waiver or consent shall be in writing and signed by the party to be charged with such waiver or consent.

This License constitutes the entire agreement between the parties with respect to the Work licensed here. There are no understandings, agreements or representations with respect to the Work not specified here. Licensor shall not be bound by any additional provisions that may appear in any communication from You. This License may not be modified without the mutual written agreement of the Licensor and You.
The rights granted under, and the subject matter referenced, in this License were drafted utilizing the terminology of the Berne Convention for the Protection of Literary and Artistic Works (as amended on September 28, 1979), the Rome Convention of 1961, the WIPO Copyright Treaty of 1996, the WIPO Performances and Phonograms Treaty of 1996 and the Universal Copyright Convention (as revised on July 24, 1971). These rights and subject matter take effect in the relevant jurisdiction in which the License terms are sought to be enforced according to the corresponding provisions of the implementation of those treaty provisions in the applicable national law. If the standard suite of rights granted under applicable copyright law includes additional rights not granted under this License, such additional rights are deemed to be included in the License; this License is not intended to restrict the license of any rights under applicable law.
